Patient Flow

**Patient Wandering
& Safety**

Infant Safety

PATIENT FLOW

Empower your workflows. Enhance patient service.

Track each phase of the operation theatre process.

See any delay at any point in the process and act accordingly.

Shorten patient stay and serve more patients.

Ensure that the right patient is taken to the correct operating room.

Inform relatives of the patients about the operation process via visual dashboards.

Monitor the patient journey in the operating theatre process thoroughly without any human input. See where the bottlenecks are and what exactly causes the delays. Focus on decreasing patient waiting times and increase operating room utilization.

PATIENT WANDERING & SAFETY

Protect your patients. At all times.

 Set up safe zones for patients with a risk of falling or those with Alzheimer's disease, and track them across the hospital.

 Receive instant alerts if any patient tries to leave their pre-designated zone. There is no need for manual monitoring.

 Allow patients to call for an emergency 24/7 across the hospital through integration with your Nurse Call system.

 Emergency calls are received with real-time location information of the patient to ensure the quickest possible reaction.

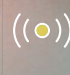

Track your patients 24/7 across the hospital. Get notified if any patient tries to leave their pre-designated zone.

INFANT SAFETY

Keep your infants safe. At all times.

Protect your infants 24/7 by receiving real-time alerts if there is an unauthorized attempt to move them out of their pre-designated safe zone. Ensure correct mother-infant matching.

 Continuously monitor each infant with the highest precision throughout the hospital.

 Receive instant alerts in case of any kidnapping attempt.

 Tamper-proof Borda Infant Tag provides instant alerts if there's an attempt to remove the tag from an infant's ankle.

 Ensure that every infant is always delivered to their mother.

 See any kidnapping attempt through CCTV integration.

Key Benefits

Increase up time

Decrease life time cost

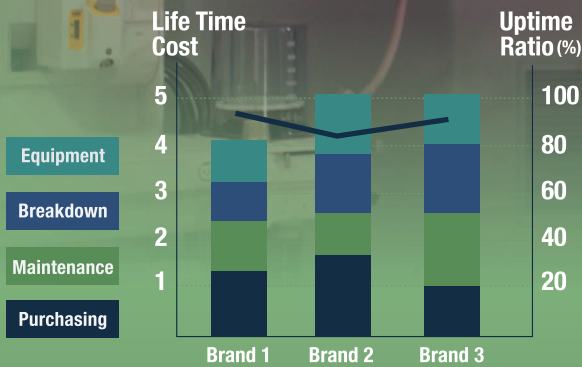

Asset Management

Asset Utilization

Asset Safety

ASSET MANAGEMENT

Take control of your assets. Spend more time with your patients.

Count assets quickly and systematically without requiring a line of sight.

Identify which assets are lost or relocated.

Reduce asset searching time from hours to minutes.

Maintain paperless custody.

Easily schedule preventative maintenance and create automated workflows.

Count all your assets in the quickest, most accurate way and simultaneously receive an up-to-date asset inventory list. Track your maintenance and calibration process automatically. Increase asset efficiency, decrease operational costs, and eliminate over-purchase.

ASSET UTILIZATION

Identify which assets are idle and which assets are used the most.

Re-allocate assets to where they are in most demand and avoid unnecessary purchases and rentals.

Find any assets in a matter of seconds.

Ensure that the required assets are in their pre-designated area and are available for patient care.

Highest return from mobile assets.

An average asset in a hospital remains unutilized for more than 50% of its lifespan. Identify how long your assets are being used in which location. Intelligently locate and manage assets according to demand. Maximize efficiency.

ASSET SAFETY

Ensure your assets are in your facility. At all times.

Do you often lose your infusion pump, pillows, towels, oximeters, and more?

Prevent asset loss by receiving real-time alerts in case of any theft attempt or unauthorized change of location.

Set safe zones for your assets and automatically detect unauthorized asset movement through real-time location information.

See the video of the risk moment through CCTV integration.

STAFF UTILIZATION

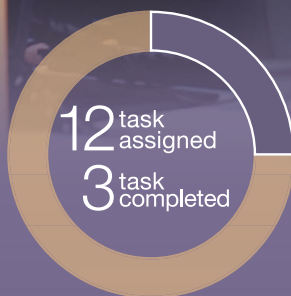

NURSE

PORTER

TECHNICIAN

Optimize staff-centric operations.

Monitor whether tasks are completed within specified durations and act accordingly.

Observe staff density and identify bottlenecks throughout the hospital.

Measure and improve staff response time to the patients and time spent in each patient room.

Nurses spend just 37% of their time on patient care.

Gain a bird's eye view into staff operations, observe inefficiencies, and streamline the processes to manage time and labor better. Focus on better patient care.

STAFF DURESS

Save staff with one button.

Protect your staff by enabling them to make an emergency call with the press of a single button on their Borda Staff Tag.

Ensure that your staff can call for emergency 24/7 across the hospital.

Minimize response time. Emergency calls are transmitted to security personnel with the exact real-time location information of the caller.

LOCATION-AWARE WORK DEMAND MANAGEMENT

Beyond task assignment.

Eliminate manual labor in the task assignment process. Automatically assign each task to the appropriate staff in the most accurate and fastest way. Ensure increased productivity and efficiency in meeting your business goals.

Assign tasks to the most appropriate personnel based on their real-time location and workload information.

Stop planning in spreadsheets. Assign tasks in less than 10 seconds.

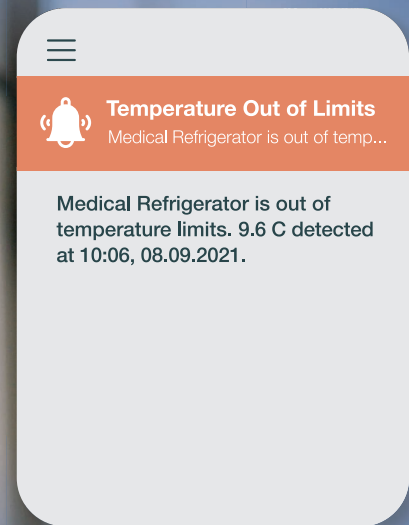

Decrease the patient wait-time and footprints of porters across the hospital.

Prevent the disproportionate distribution of work. Boost staff satisfaction and loyalty.

ENVIRONMENTAL MONITORING

Eyes-free monitoring.

Ensure that your food and medicine are kept at the specified temperature and humidity levels 24/7 to avoid health risks and prevent product loss. Intervene before any harm or loss occurs.

Continuously monitor temperature and humidity levels remotely.

Receive real-time alerts when the temperature/humidity of critical areas go out of the pre-designated range.

Remain compliant with the regulatory safety requirements.
